we have \mathbb{R}^n as a vector space over \mathbb{R} . We can define a linear map $T: \mathbb{R}^n \rightarrow \mathbb{R}^n$ by $T(x) = Ax$ for all $x \in \mathbb{R}^n$. This map is linear and its matrix representation with respect to the standard basis is A .

we have \mathbb{R}^n as a vector space over \mathbb{R} . We can define a linear map $T: \mathbb{R}^n \rightarrow \mathbb{R}^n$ by $T(x) = Ax$ for all $x \in \mathbb{R}^n$. This map is linear and its matrix representation with respect to the standard basis is A .

we have \mathbb{R}^n as a vector space over \mathbb{R} .
